Program Overview

- You will have an individualized rehab program set up to meet specific needs and goals. Our program is supervised by Registered Nurses who are trained in rehabilitation and emergencies.
- Cardiac/ Pulmonary Rehabilitation is a prescribed therapy, which means it is not open to the public. A referral and a physician order is necessary to start the program.
- Program length can last up to 36 sessions or 8-12 weeks, based on your needs.
- Exercise sessions are usually 2-3 times per week Monday - Thursday. Each session lasts 60 minutes. Regular attendance is required to benefit from this program. Please call if you need to cancel.
- Along with exercise you will also be attending education sessions that will be outlined and determined by the rehab staff. Showing active participation in education efforts can help you reach your goal.

Why would I want or need these Services?

After a cardiac or pulmonary medical event, patients need to improve heart or lung function, build healthy habits, reduce stress and develop a plan for their future health.

Cardiac Rehab Phase 2

This Outpatient service is prescribed by a medical provider after a heart event. The program combines exercise and education along with access to other services such as:

- *Dietary Services*
- *Nurses to aid you during your journey*
- *Personalized exercise program*
- *Cardiac monitoring during sessions*

Pulmonary Rehab Phase 2

This program is designed for patients dealing with some form of chronic lung disease. Pulmonary Rehab is a prescribed therapy that is monitored by our cardio-pulmonary rehab team. Some of the services include:

- *Education on your lung disease*
- *Tips to manage daily breathing*
- *Education on medication*
- *Dietary Services*

Maintenance Program Phase 3

This is a supervised exercise program that meets two times a week and is available Monday - Thursday. Most generally this group consists of graduates from the Cardiac and Pulmonary Phase 2 programs. Some of the services include:

- *Continue your learned exercises*
- *Maintain your health and continue improvement*

Qualifications

Cardiac Rehab Phase 2

- *Post MI (heart attack)*
- *Stent placement*
- *Angioplasty*
- *Chronic chest pain (Angina)*
- *CABG (Coronary Artery Bypass Surgery)*
