

IDENTIFICATION GUIDE FOR REINFORCEMENT STEEL & DOWEL BAR PRODUCERS

August 22, 2014

Illinois Department of Transportation

Revision Information Log
Guide for Certified Reinforcement Rebar/Dowel Producers
August 22, 2014

The Guide for Certified Reinforcement Rebar/Dowel Producers is continually reviewed by the Testing & Field Coordinator for adequacy and updated as necessary to reflect the current policies and technology changes. Updates are made to the electronic file as needed and hard copies are uncontrolled. Archive versions are available to examine in the Bureau of Materials and Physical Research.

INSTRUCTIONS FOR IDENTIFICATION OF REINFORCEMENT BAR MARKINGS

The specifications for billet steel, axle steel, and rail steel reinforcement bars (AASHTO M 31, M 322 / ASTM A 615, A 996, as well as A 706) require identification marks to be rolled into the surface of one side of the bar to denote the producer's mill designation, bar size, type of steel, and, for Grade 420 (Grade 60), a grade mark indicating yield strength, and for Grade 520 (Grade 75), a double grade mark indicating yield strength. Grade 300 (Grade 40) bars show only three marks (no grade mark) usually in the following order:

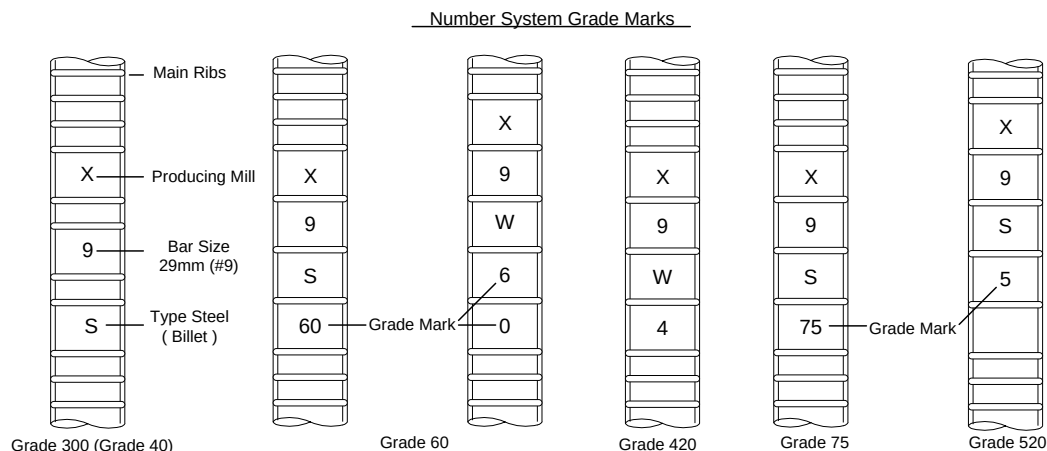

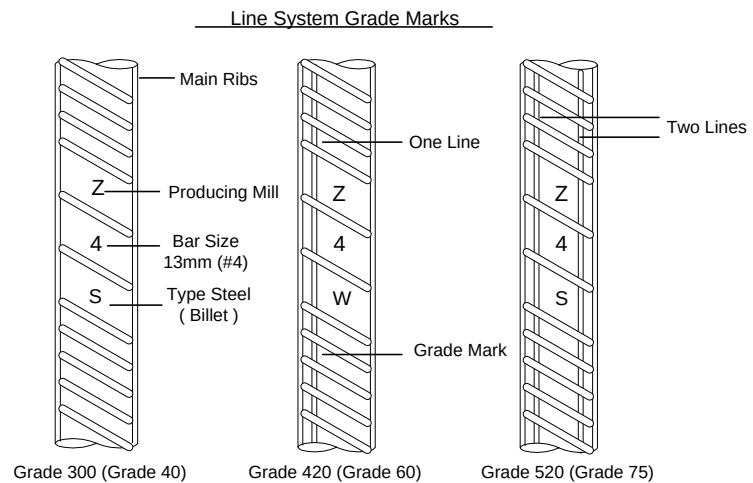

- 1st — Producing Mill (usually an initial)
- 2nd — Bar Size Number (10 mm - 36 mm [#3 - #11], 43 mm [#14], and 57 mm [#18])
- 3rd — Type Steel:

S for Billet (M 31 / ASTM A-615)
W for weldable steel (ASTM A-706)

A for Axle (M 322 / ASTM A-966)
⌒ or **R** for Rail (M 322 / ASTM A-966)

Grade 420 (Grade 60) bars must also show a minimum yield designation grade mark of either the number "4" ("60") or one grade mark line continued for at least five deformation spaces.

A grade mark line is smaller than and between the two main ribs, which are sometimes on the opposite side of the bar. When a numerical grade is used, it is the 4th in order.
