DEVELOPMENT OF THE DRUG FORMULARY

The Drug Formulary is the cornerstone of drug therapy quality assurance and cost containment efforts. The Drug Formulary has been successfully used by hospitals and managed care organizations to provide comprehensive, cost-effective pharmacy services.

The Drug Formulary document was developed by the PHP of Northern Indiana (PHP) Pharmacy and Therapeutics Committee (P&T Committee). This committee, composed of physicians from various medical specialties, reviewed the medications in all therapeutic categories based on safety, effectiveness, and cost and selected the most cost-effective agent(s) in each class.

Formulary development and maintenance is a dynamic process. The P&T Committee will regularly review new and existing medications to ensure the Formulary remains responsive to the needs of our members and providers. The Formulary will be updated periodically.

As you use the Formulary, we invite your suggestions to improve the format or content. Thank you for your cooperation.

HOW TO USE THIS DOCUMENT

The Formulary is a listing of the most commonly prescribed medications sorted by therapy class marketed at the time of the Formulary printing. It is intended for use by health plan physicians and pharmacy providers. Unless exceptions are noted, all forms (tablet, capsule, liquid, topical) and strengths of a medication product are covered as indicated. At the end of the Formulary is an index listing medications alphabetically with the corresponding page number where other medications in that class can be found.

Medications listed in italic letters are generic medications. Medications listed in non-italic capital letters are brand name medications. Each medication also has a tier indication.

These categories are defined as follows:

Traditional Drugs

- **Tier 1:** Preferred Generics. Generic medications contain the same active ingredient(s) as their corresponding brand name medication and have been approved by the Food and Drug Administration (FDA) for therapeutic equivalency to their brand name product. These products are the least costly.
- **Tier 2:** Non-Preferred Generics. These generic medications are more costly than the preferred generics.
- **Tier 3:** Brand Formulary. Medications that have been reviewed by the Pharmacy & Therapeutics Committee and found to have therapeutic advantage or overall value over non-formulary medications, factoring safety, efficacy, and cost.
- **Tier 4:** Brand Non-Formulary. Medications that have been reviewed by the Pharmacy & Therapeutics Committee and found not to have a significant therapeutic advantage or overall value over alternative formulary products. Please note that the information provided is not intended to substitute the physician's independent medical judgment based on the member's specific needs.

Specialty Drugs

- **Tier S1:** Preferred Specialty drugs. These medications can be injectables or orals that are extremely expensive, must be filled at a specialty pharmacy, and may need special instructions and handling.
- **Tier S2:** Specialty drugs. These medications can be injectables or orals that are extremely expensive, must be filled at a specialty pharmacy, and may need special instructions and handling.

Medical Drugs

- **Tier 7:** Medical ONLY medications that may be covered under the Medical Benefit.

Some medications may be subject to prior authorizations (PA), step therapy (ST), double step therapy (DST), and quantity level limits (QL). Those medications are indicated by (PA), (ST), (DST), or (QL) in the document. See policy below on how to obtain overrides for these medications.

PRESCRIPTION MEDICATION POLICIES

Outpatient medications:

The Drug Formulary applies only to prescription medications dispensed to outpatients by participating pharmacies. The Formulary does not apply to inpatient medications or to medications obtained from and/or administered by a physician in the office.

Non-Prescription Medication (OTC) Policy:

Over-the-counter (OTC) products are not covered, but some are listed for informational purposes. When available, non-prescription medications may be less costly to the member than a prescription medication. If a prescription product is available in the identical strength, dosage form, and active ingredient(s) as an OTC product, the prescription product will not be covered. In these instances, physicians and pharmacists should refer members to the OTC equivalent product. If the member or physician chooses the equivalent prescription product, the member must pay the entire cost of the prescription.

Generic Medication Policy:

PHP encourages generic substitution whenever possible to help reduce the member's out-of-pocket expense, plus help contain the overall cost of the member's prescription medication benefit.

Medications that have generic equivalents are covered at a generic reimbursement level, and should be prescribed and dispensed in the generic form. Maximum Allowable Cost (MAC) limits of reimbursement have been established for these medications and are listed in the health plan MAC list. Providers are reminded of the following:

1. When generic substitution conflicts with state regulations or restrictions, the pharmacist must gain approval from the prescriber to use the generic equivalent.
2. If a physician indicates "Dispense As Written" (DAW) or if a member insists on the brand name product for a medication included on the MAC list, the member must pay the applicable copay plus the cost difference between the brand name product and the MAC amount (Additional Charge).

Unapproved Use of Formulary Medications:

The member's Certificate of Coverage states medications will be eligible for coverage only if they are FDA approved medications used for non-experimental indications. Non-experimental indications include the labeled indication(s) (FDA-approved) and other indications accepted as effective by the balance of currently available scientific evidence and informed professional opinion.

Experimental and investigational medications, and medications used for cosmetic purposes, are not eligible for coverage.

Prescriptions for Non-Formulary Medications:

Physicians are expected to comply with the Medication Formulary when prescribing medications for plan members. If a pharmacist receives a prescription for a non-Formulary medication, the pharmacist will attempt to contact the physician to request a change to a Formulary product. If the physician is unwilling to change, or is unavailable, the pharmacist will dispense the prescription as written. The member must pay the higher copay.

Copay Plan Determinations:

The member will pay only the indicated 1st, 2nd, 3rd, 4th, 5th, 6th or 7th tier copay for the prescription unless one of the following conditions applies:

1. If a physician indicates “Dispense As Written” (DAW) or if a member chooses the brand name product for a prescription of a medication included on the MAC list, the member must pay the applicable copay plus the cost difference between the brand name product and the MAC amount (Additional Charge).
2. If a prescription is written for a medication available as an OTC product in the identical dosage, form, strength, and active ingredient, the prescription product will not be covered. The pharmacist should refer the member to the OTC product. If the member or physician insists on the prescription equivalent product, the member will be responsible for the entire cost of the prescription.
3. If a physician prescribes a medication, which is not covered, and no satisfactory alternative product is available, the member must pay the entire prescription cost. Members should consult their benefit descriptions for a list of medications not covered.

Prior Authorization/Quantity Level Limits:**Prior Authorization:**

To promote the most appropriate utilization, selected high-risk or high-cost medications require a prior authorization by the health plan to be eligible for coverage. The P&T Committee have established prior authorization criteria with input from plan physicians and consideration of the current medical literature. Medications requiring a prior authorization for coverage are indicated by (PA) after medication name.

Quantity Level Limits:

Some medications may be subject to quantity level limits based on the manufacturer’s packaging size or adopted clinical guidelines. These medications are designated in the Drug Formulary by (QL) by the medication name. The purpose of these maximum quantity limits is to ensure the proper billing of products and/or encourage the use of therapeutically indicated medication regimens.

Prior authorization/ Quantity Level Limit override requests should be directed to:

Pharmacy Department
PHP of Northern Indiana
1700 Magnavox Way, Suite 201
Fort Wayne, IN 46804
Phone: (260) 432-6690 Ext. 339
E-mail: custsvc@phpni.com

If a physician provider requests that a new or existing medication be added to the Formulary, a letter indicating the significant advantages of the medication product over current formulary medications should be mailed to the above address.

UNDERSTANDING THE SYMBOLS USED THROUGHOUT THIS BOOK

Throughout this book, you will see certain symbols that draw your attention to information that we would like you to consider before prescribing.

Symbols

PA Prior authorization is required. The Plan requires you or your physician to get Prior Authorization for certain drugs. This means that you will need to get approval before you fill your prescription. If you don't get approval, the drug may not be covered.

ST Step therapy is required. In some cases, the Plan requires you to first try certain drugs to treat your medical condition before another drug for that condition is covered. For example, if Drug A and Drug B both treat your medical condition, we may not cover Drug B unless you try Drug A first. If Drug A does not work for you, then we will consider covering Drug B.

DST Double step therapy is required. In some cases, the Plan requires you to first try at least 2 other drugs to treat your medical condition before your medication is covered. For example, if Drug A, Drug B and Drug C are used to treat your medical condition, we may not cover Drug C unless you have tried both Drug A and Drug B first. If Drugs A and B do not work for you, we will consider covering Drug C.

QL Quantity limit. For certain drugs, the Plan Limits the amount of the drug that will be covered per prescription.

ACA Affordable Care Act (ACA) products may be covered by the plan at 100% when you meet certain age and gender requirements; have a prescription from a health care provider (even for over-the-counter, or OTC, medicines); and fill your prescription at an in-network pharmacy.

PRE Preventive drugs that may be covered 100% when filled for preferred drugs at an in-network pharmacy. Quantity limits may apply.

CONSIDERING PREFERRED ALTERNATIVES

We realize that you may not always be able to prescribe preferred drugs for your patients. However, by referring to this book before prescribing, you can help ensure that your patients take full advantage of coverage provided by their prescription drug plan. Pharmacies cannot substitute a preferred brand-name drug without your approval. Therefore, a pharmacist may contact you to obtain authorization to dispense an alternative preferred product when a non-preferred drug is prescribed. Again, since your patients can often benefit by paying less for alternative preferred products, we ask that you consider prescribing these preferred alternatives whenever possible.

This Guidebook includes information accurate at the time it was collected from Express Scripts' systems and may not reflect actual benefit setup details at later times.

Table of Contents

ANTI - INFECTIVES	2
ANTINEOPLASTIC & IMMUNOSUPPRESSANT DRUGS	11
AUTONOMIC & CNS DRUGS, NEUROLOGY & PSYCH.....	17
