## More Information: https://www.cincinnati-oh.gov/ecc/about-ecc/performance/

Quality Assurance is a process for systematic monitoring and evaluation of the 911 calls for adherence to ECC's protocol-based system. A call with a "non-compliant" evaluation does not indicate that there was a serious error or bad outcome, but simply that there is room for improvement via feedback and continuing education. The center's goal, which is aligned with International Academies of Emergency Dispatch requirements to be considered an Accredited Center of Excellence, is to demonstrate 7% or less of evaluated 911 calls as non-compliant with protocols, within a particular discipline (e.g., police).
